

# ALPHA CHEMICALS PTY LTD

# Chemwatch: 11345

Version No: 6.1 Safety Data Sheet according to WHS Regulations (Hazardous Chemicals) Amendment 2020 and ADG requirements Chemwatch Hazard Alert Code: 2

Issue Date: 20/06/2022 Print Date: 15/07/2022 S.GHS.AUS.EN

### SECTION 1 Identification of the substance / mixture and of the company / undertaking

| Floader identilier            |   |  |
|-------------------------------|---|--|
| Product name                  | MANGANESE CHLORIDE TETRAHYDRATE   |  |
| Chemical Name                 | manganese chloride, tetrahydrate  |  |
| Synonyms                      | Mn-Cl2.4h2O; manganese chloride, tetrahydrate; manganese dichloride, tetrahydrate; manganous chloride, tetrahydrate; manganese dichloride; manganese (II) chloride, UNIVAR, UNILAB; manganese chloride tetrahydrate cryst.; manganese chloride hydrated |  |
| Proper shipping name          | ENVIRONMENTALLY HAZARDOUS SUBSTANCE, SOLID, N.O.S. (contains Manganese chloride tetrahydrate)   |  |
| Chemical formula              | nical formula MnCl2.4H2O Cl2Mn  |  |
| Other means of identification | Not Available   |  |
| CAS number                    | 13446-34-9  |  |

#### Relevant identified uses of the substance or mixture and uses advised against

Relevant identified uses Most of the manganese produced is used in steel alloy manufacture, while other alloys may be formed with iron, copper, zinc and aluminium. [~Intermediate ~]

#### Details of the supplier of the safety data sheet

| Registered company name | ALPHA CHEMICALS PTY LTD                         |  |
|-------------------------|---|--|
| Address                 | 4 ALLEN PLACE WETHERILL PARK NSW 2099 Australia |  |
| Telephone               | 61 (0)2 9982 4622                               |  |
| Fax                     | Not Available                                   |  |
| Website                 | ~   |  |
| Email                   | shane@alphachem.com.au                          |  |

#### Emergency telephone number

| Association / Organisation        | ALPHA CHEMICALS PTY LTD | CHEMWATCH EMERGENCY RESPONSE |  |
|-----------------------------------|-------------------------|------------------------------|--|
| Emergency telephone<br>numbers    | 61 (0)418 237 771       | +61 1800 951 288             |  |
| Other emergency telephone numbers | Not Available           | +61 3 9573 3188              |  |

Once connected and if the message is not in your prefered language then please dial 01

#### **SECTION 2 Hazards identification**

### Classification of the substance or mixture

### HAZARDOUS CHEMICAL. DANGEROUS GOODS. According to the WHS Regulations and the ADG Code.

#### ChemWatch Hazard Ratings

|              | Min | Max |                         |
|--------------|-----|-----|-------------------------|
| Flammability | 0   |     |                         |
| Toxicity     | 2   |     | 0 = Minimum             |
| Body Contact | 2   | 1   | 1 = Low                 |
| Reactivity   | 0   |     | 2 = Moderate            |
| Chronic      | 0   |     | 3 = High<br>4 = Extreme |

| Poisons Schedule  | Not Applicable |  |
|---|----------------|--|
| Classification [1]       Acute Toxicity (Oral) Category 4, Skin Corrosion/Irritation Category 2, Serious Eye Damage/Eye Irritation Category 2A, Hazardous to the Active Environment Long-Term Hazard Category 2         Legend:       1. Classified by Chemwatch; 2. Classification drawn from HCIS; 3. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI |                |  |

| Hazard pictogram(s) |  |
|---------------------|--|
|                     |  |

Signal word Warning

# Hazard statement(s)

| H302 | Harmful if swallowed.                                 |  |
|------|---|--|
| H315 | Causes skin irritation.                               |  |
| H319 | Causes serious eye irritation.                        |  |
| H411 | H411 Toxic to aquatic life with long lasting effects. |  |

#### Precautionary statement(s) Prevention

| P264  | Wash all exposed external body areas thoroughly after handling. |  |
|---|---|--|
| P270  | Do not eat, drink or smoke when using this product.             |  |
| P273  | Avoid release to the environment.                               |  |
| P280 Wear protective gloves, protective clothing, eye protection and face protection. |   |  |

### Precautionary statement(s) Response

| P305+P351+P338 | IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. |  |
|----------------|--|--|
| P337+P313      | If eye irritation persists: Get medical advice/attention.  |  |
| P391           | Collect spillage.  |  |
| P301+P312      | IF SWALLOWED: Call a POISON CENTER/doctor/physician/first aider if you feel unwell.  |  |
| P302+P352      | IF ON SKIN: Wash with plenty of water.   |  |
| P330           | Rinse mouth.   |  |
| P332+P313      | P332+P313 If skin irritation occurs: Get medical advice/attention.   |  |
| P362+P364      | Take off contaminated clothing and wash it before reuse.   |  |

#### Precautionary statement(s) Storage

Not Applicable

# Precautionary statement(s) Disposal

| P501 Dispose of contents/container to authorised hazardous or special waste collection point in accordance with any local regulation |  | Dispose of contents/container to authorised hazardous or special waste collection point in accordance with any local regulation. |
|--|--|--|
| Not Applicable   |  |  |

# **SECTION 3 Composition / information on ingredients**

#### Substances

| CAS No     |  | %[weight] | Name                            |
|------------|--|-----------|---------------------------------|
| 13446-34-9 |  | >96       | Manganese chloride tetrahydrate |
| Legend:    | Legend: 1. Classified by Chemwatch; 2. Classification drawn from HCIS; 3. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI; 4. Classification drawn from C&L<br>* EU IOELVs available |           |                                 |

Mixtures

See section above for composition of Substances

#### **SECTION 4 First aid measures**

| Description of first aid measure | es  |
|----------------------------------|---|
| Eye Contact                      | <ul> <li>If this product comes in contact with the eyes:</li> <li>Wash out immediately with fresh running water.</li> <li>Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids.</li> <li>Seek medical attention without delay; if pain persists or recurs seek medical attention.</li> <li>Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.</li> </ul>                   |
| Skin Contact                     | If skin contact occurs: <ul> <li>Immediately remove all contaminated clothing, including footwear.</li> <li>Flush skin and hair with running water (and soap if available).</li> <li>Seek medical attention in event of irritation.</li> </ul>  |
| Inhalation                       | <ul> <li>If fumes or combustion products are inhaled remove from contaminated area.</li> <li>Lay patient down. Keep warm and rested.</li> <li>Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures.</li> <li>Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary.</li> <li>Transport to hospital, or doctor.</li> </ul> |

| Ingestion | <ul> <li>IF SWALLOWED, REFER FOR MEDICAL ATTENTION, WHERE POSSIBLE, WITHOUT DELAY.</li> <li>For advice, contact a Poisons Information Centre or a doctor.</li> <li>Urgent hospital treatment is likely to be needed.</li> <li>In the mean time, qualified first-aid personnel should treat the patient following observation and employing supportive measures as indicated by the patient's condition.</li> <li>If the services of a medical officer or medical doctor are readily available, the patient should be placed in his/her care and a copy of the SDS should be provided. Further action will be the responsibility of the medical specialist.</li> <li>If medical attention is not available on the worksite or surroundings send the patient to a hospital together with a copy of the SDS.</li> </ul> Where medical attention is not immediately available or where the patient is more than 15 minutes from a hospital or unless instructed otherwise: <ul> <li>INDUCE vomiting with fingers down the back of the throat, ONLY IF CONSCIOUS. Lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration. NOTE: Wear a protective glove when inducing vomiting by mechanical means.</li></ul> |
|-----------|---|
|-----------|---|

### Indication of any immediate medical attention and special treatment needed

Both dermal and oral toxicity of manganese salts is low because of limited solubility of manganese. No known permanent pulmonary sequelae develop after acute manganese exposure. Treatment is supportive.

#### [Ellenhorn and Barceloux: Medical Toxicology]

In clinical trials with miners exposed to manganese-containing dusts, L-dopa relieved extrapyramidal symptoms of both hypo kinetic and dystonic patients. For short periods of time symptoms could also be controlled with scopolamine and amphetamine. BAL and calcium EDTA prove ineffective.

[Gosselin et al: Clinical Toxicology of Commercial Products.]

### **SECTION 5 Firefighting measures**

#### Extinguishing media

- Water spray or fog.
- Foam.
- Dry chemical powder.
- BCF (where regulations permit).
- Carbon dioxide.

#### Special hazards arising from the substrate or mixture

Fire Incompatibility None known.

| Advice for firefighters |  |
|-------------------------|--|
| Fire Fighting           | <ul> <li>Alert Fire Brigade and tell them location and nature of hazard.</li> <li>Wear breathing apparatus plus protective gloves in the event of a fire.</li> <li>Prevent, by any means available, spillage from entering drains or water courses.</li> <li>Use fire fighting procedures suitable for surrounding area.</li> <li>DO NOT approach containers suspected to be hot.</li> <li>Cool fire exposed containers with water spray from a protected location.</li> <li>If safe to do so, remove containers from path of fire.</li> <li>Equipment should be thoroughly decontaminated after use.</li> </ul> |
| Fire/Explosion Hazard   | <ul> <li>Non combustible.</li> <li>Not considered a significant fire risk, however containers may burn.</li> <li>Decomposition may produce toxic fumes of:<br/>hydrogen chloride<br/>metal oxides</li> </ul>   |
| HAZCHEM                 | 2Z   |

#### **SECTION 6 Accidental release measures**

### Personal precautions, protective equipment and emergency procedures See section 8

#### **Environmental precautions**

See section 12

#### Methods and material for containment and cleaning up

| Minor Spills | <ul> <li>Remove all ignition sources.</li> <li>Clean up all spills immediately.</li> <li>Avoid contact with skin and eyes.</li> <li>Control personal contact with the substance, by using protective equipment.</li> <li>Use dry clean up procedures and avoid generating dust.</li> <li>Place in a suitable, labelled container for waste disposal.</li> <li>Environmental hazard - contain spillage.</li> </ul> |
|--------------|---|
| Major Spills | <ul> <li>Environmental hazard - contain spillage.</li> <li>Moderate hazard.</li> <li>CAUTION: Advise personnel in area.</li> <li>Alert Emergency Services and tell them location and nature of hazard.</li> <li>Control personal contact by wearing protective clothing.</li> <li>Prevent, by any means available, spillage from entering drains or water courses.</li> </ul>                                     |

Recover product wherever possible.
 IF DRY: Use dry clean up procedures and avoid generating dust. Collect residues and place in sealed plastic bags or other containers for disposal.

Personal Protective Equipment advice is contained in Section 8 of the SDS.

#### SECTION 7 Handling and storage

| Precautions for safe handling |  |
|-------------------------------|--|
| Safe handling                 | <ul> <li>Avoid all personal contact, including inhalation.</li> <li>Wear protective clothing when risk of exposure occurs.</li> <li>Use in a well-ventilated area.</li> <li>Prevent concentration in hollows and sumps.</li> <li>DO NOT enter confined spaces until atmosphere has been checked.</li> <li>DO NOT allow material to contact humans, exposed food or food utensils.</li> <li>Avoid contact with incompatible materials.</li> <li>When handling, DO NOT eat, drink or smoke.</li> </ul>   |
| Other information             | <ul> <li>Store in original containers.</li> <li>Keep containers securely sealed.</li> <li>Store in a cool, dry area protected from environmental extremes.</li> <li>Store away from incompatible materials and foodstuff containers.</li> <li>Protect containers against physical damage and check regularly for leaks.</li> <li>Observe manufacturer's storage and handling recommendations contained within this SDS.</li> <li>For major quantities:</li> <li>Consider storage in bunded areas - ensure storage areas are isolated from sources of community water (including stormwater, ground water, lakes and streams).</li> <li>Ensure that accidental discharge to air or water is the subject of a contingency disaster management plan; this may require consultation with local authorities.</li> </ul> |

#### Conditions for safe storage, including any incompatibilities

| Suitable container      | <ul> <li>Glass container is suitable for laboratory quantities</li> <li>Polyethylene or polypropylene container.</li> <li>Check all containers are clearly labelled and free from leaks.</li> </ul>   |
|-------------------------|---|
| Storage incompatibility | <ul> <li>Segregate from potassium, sodium and zinc.</li> <li>WARNING: Avoid or control reaction with peroxides. All <i>transition metal</i> peroxides should be considered as potentially explosive. For example transition metal complexes of alkyl hydroperoxides may decompose explosively.</li> <li>The pi-complexes formed between chromium(0), vanadium(0) and other transition metals (haloarene-metal complexes) and mono-or poly-fluorobenzene show extreme sensitivity to heat and are explosive.</li> <li>Avoid reaction with borohydrides or cyanoborohydrides</li> <li>Metals and their oxides or salts may react violently with chlorine trifluoride and bromine trifluoride.</li> <li>These trifluorides are hypergolic oxidisers. They ignite on contact (without external source of heat or ignition) with recognised fuels - contact with these materials, following an ambient or slightly elevated temperature, is often violent and may produce ignition.</li> <li>The state of subdivision may affect the results.</li> </ul> |

### **SECTION 8 Exposure controls / personal protection**

#### **Control parameters**

#### Occupational Exposure Limits (OEL)

| INGREDIENT DATA                    |   |  |          |               |               |               |               |       |
|------------------------------------|---|--|----------|---------------|---------------|---------------|---------------|-------|
| Source                             | Ingredient Material name  |  | name     | ти            | VA            | STEL          | Peak          | Notes |
| Australia Exposure Standards       | Manganese chloride tetrahydrate Manganese, dust & compounds (as |  | Mn) 1 r  | mg/m3         | Not Available | Not Available | Not Available |       |
| Emergency Limits                   |   |  |          |               |               |               |               |       |

| Manganese chloride<br>tetrahydrate | 6.9 mg/m3   |  | 11 mg/m3 |               | 170 mg/m3     |               |               |       |
| Ingredient                         | Original IDLH   |  |          | Revised IDLH  |               |               |               |       |
| Manganese chloride<br>tetrahydrate | 500 mg/m3   |  |          | Not Available |               |               |               |       |

#### Exposure controls

| Appropriate engineering<br>controls | Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection. The basic types of engineering controls are:<br>Process controls which involve changing the way a job activity or process is done to reduce the risk.<br>Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation that strategically "adds" and "removes" air in the work environment. Ventilation can remove or dilute an air contaminant if designed properly. The design of a ventilation system must match the particular process and chemical or contaminant in use.<br>Employers may need to use multiple types of controls to prevent employee overexposure. |
|-------------------------------------|---|
|                                     | Local exhaust ventilation usually required.   |

| MANGANESE CHLORIDE | TETRAHYDRATE |
|--------------------|--------------|
|--------------------|--------------|

| Personal protection     |   |
|-------------------------|---|
| Eye and face protection | <ul> <li>Safety glasses with side shields.</li> <li>Chemical goggles.</li> <li>Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation - lens should be removed in a clean environment only after workers have washed hands thoroughly.</li> </ul>  |
| Skin protection         | See Hand protection below   |
| Hands/feet protection   | The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer to manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. The exact break through time for substances has to be obtained from the manufacturer of the protective gloves and has to be observed when making a final choice. Personal hygiene is a key element of effective hand care. Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly. Application of a non-perfumed moisturiser is recommended. Suitability and durability of glove type is dependent on usage. Experience indicates that the following polymers are suitable as glove materials for protection against undissolved, dry solids, where abrasive particles are not present. <ul> <li>polychloroprene.</li> <li>nitrile rubber.</li> <li>butyl rubber.</li> <li>fluorocaoutchouc.</li> <li>polyvinyl chloride.</li> </ul> <li>Gloves should be examined for wear and/ or degradation constantly.</li> |
| Body protection         | See Other protection below  |
| Other protection        | <ul> <li>Overalls.</li> <li>P.V.C apron.</li> <li>Barrier cream.</li> <li>Skin cleansing cream.</li> <li>Eye wash unit.</li> </ul>  |

#### **Respiratory protection**

Particulate. (AS/NZS 1716 & 1715, EN 143:2000 & 149:001, ANSI Z88 or national equivalent)

| Required Minimum Protection Factor | Half-Face Respirator | Full-Face Respirator | Powered Air Respirator |
|------------------------------------|----------------------|----------------------|------------------------|
| up to 10 x ES                      | P1<br>Air-line*      | -                    | PAPR-P1<br>-           |
| up to 50 x ES                      | Air-line**           | P2                   | PAPR-P2                |
| up to 100 x ES                     | -                    | P3                   | -                      |
|                                    |                      | Air-line*            | -                      |
| 100+ x ES                          | -                    | Air-line**           | PAPR-P3                |

\* - Negative pressure demand \*\* - Continuous flow

A(All classes) = Organic vapours, B AUS or B1 = Acid gasses, B2 = Acid gas or hydrogen cyanide(HCN), B3 = Acid gas or hydrogen cyanide(HCN), E = Sulfur dioxide(SO2), G = Agricultural chemicals, K = Ammonia(NH3), Hg = Mercury, NO = Oxides of nitrogen, MB = Methyl bromide, AX = Low boiling point organic compounds(below 65 degC)

· Respirators may be necessary when engineering and administrative controls do not adequately prevent exposures.

The decision to use respiratory protection should be based on professional judgment that takes into account toxicity information, exposure measurement data, and frequency and likelihood of the worker's exposure - ensure users are not subject to high thermal loads which may result in heat stress or distress due to personal protective equipment (powered, positive flow, full face apparatus may be an option).

· Published occupational exposure limits, where they exist, will assist in determining the adequacy of the selected respiratory protection. These may be government mandated or vendor recommended.

· Certified respirators will be useful for protecting workers from inhalation of particulates when properly selected and fit tested as part of a complete respiratory protection program. Where protection from nuisance levels of dusts are desired, use type N95 (US) or type P1 (EN143) dust masks. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU)

· Use approved positive flow mask if significant quantities of dust becomes airborne.

Try to avoid creating dust conditions.

#### **SECTION 9** Physical and chemical properties

### Information on basic physical and chemical properties

| Appearance       | Rose, monoclinic, deliquescent crystals. Soluble in alcohol. Insoluble in ether. Boiling point: -H2O @ 106 deg.C -4 H2O @ 198 deg.C Solubility in water @ 8 deg.C:,151 g/100 cc. @ 100 deg.C: 656 g/100 cc. |   |                 |  |
|------------------|---|---|-----------------|--|
| Physical state   | Divided Solid   | Relative density (Water = 1)            | 2.01 @ 25 deg.C |  |

# **SECTION 11 Toxicological information**

### Information on toxicological effects

| inormation on toxicological e        |   |  |   |  |  |
|--------------------------------------|---|--|---|--|--|
| Inhaled                              | The material is not thought to produce respiratory irritation (as classified by EC Directives using animal models). Nevertheless inhalation of dusts,<br>or fumes, especially for prolonged periods, may produce respiratory discomfort and occasionally, distress.<br>Inhalation of vapours, aerosols (mists, fumes) or dusts, generated by the material during the course of normal handling, may be damaging to the health of the individual.<br>Persons with impaired respiratory function, airway diseases and conditions such as emphysema or chronic bronchitis, may incur further disability<br>if excessive concentrations of particulate are inhaled.<br>If prior damage to the circulatory or nervous systems has occurred or if kidney damage has been sustained, proper screenings should be<br>conducted on individuals who may be exposed to further risk if handling and use of the material result in excessive exposures.<br>Manganese fume is toxic and produces nervous system effects characterised by tiredness. Acute poisoning is rare although acute inflammation<br>of the lungs may occur. A chemical pneumonia may also result from frequent exposure. Inhalation of freshly formed metal oxide particles sized<br>below 1.5 microns and generally between 0.02 to 0.05 microns may result in "metal fume fever". Symptoms may be delayed for up to 12 hours<br>and begin with the sudden onset of thirst, and a sweet, metallic or foul taste in the mouth. Other symptoms include upper respiratory tract<br>irritation accompanied by coughing and a dryness of the mucous membranes, lassitude and a generalised feeling of malaise. Mild to severe<br>headache, nausea, occasional vomiting, fever or chills, exaggerated mental activity, profuse sweating, diarrhoea, excessive urination and<br>prostration may also occur. Tolerance to the fumes develops rapidly, but is quickly lost. |  |   |  |  |
| Ingestion                            | Accidental ingestion of the material may be harmful; animal experiments indicate that ingestion of less than 150 gram may be fatal or may produce serious damage to the health of the individual. Poisonings rarely occur after oral administration of manganese salts because they are poorly absorbed from the gut.   |  |   |  |  |
| Skin Contact                         | This material can cause inflammation of the skin on contact in some persons.<br>The material may accentuate any pre-existing dermatitis condition<br>Open cuts, abraded or irritated skin should not be exposed to this material<br>Entry into the blood-stream, through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects. Examine the skin<br>prior to the use of the material and ensure that any external damage is suitably protected.  |  |   |  |  |
| Eye                                  | This material can cause eye irritation and damage in some persons.  |  |   |  |  |
| Chronic                              | Substance accumulation, in the human body, may occur and may cause a<br>Long term exposure to high dust concentrations may cause changes in lu-<br>micron penetrating and remaining in the lung.<br>Manganese is an essential trace element. Chronic exposure to low levels<br>tremors, slurred speech, disordered muscle tone, fatigue, anorexia, loss of  | ing function i.e. pnei<br>of manganese can | umoconiosis, caused by particles less than 0.5 include a mask-like facial expression, spastic gait, |  |  |

| Manganese chloride<br>tetrahydrate | EC50      | 72h                | Algae or other aquatic plants | 5.13-6.83mg/l | 4      |
|                                    | EC50      | 48h                | Crustacea                     | 4.7mg/L       | 5      |
|                                    | LC50      | 96h                | Fish                          | 3.17mg/l      | 2      |

Toxic to aquatic organisms.

Do NOT allow product to come in contact with surface waters or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment wash-waters.

Wastes resulting from use of the product must be disposed of on site or at approved waste sites.

May cause long-term adverse effects in the aquatic environment.

For Chloride: Although inorganic chloride ions are not normally considered toxic they can exist in effluents at acutely toxic levels. Incidental exposure to inorganic chloride may occur in occupational settings where chemicals management policies are improperly applied. The toxicity of chloride salts depends on the counter-ion (cation) present; that of chloride itself is unknown. Chloride toxicity has not been observed in humans except in the special case of impaired sodium chloride metabolism, e.g. in congestive heart failure. Healthy individuals can tolerate the intake of large quantities of chloride provided that there is an intake of fresh water following ingestion. Although excessive intake of drinking-water containing sodium chloride at concentrations above 2.5 g/L has been reported to produce hypertension, this effect is believed to be related to the sodium ion concentration. Chloride concentrations in excess of about 250 mg/L can give rise to detectable taste in water. Consumers can, however, become accustomed to concentrations in excess of 250 mg/L For Manganese and its Compounds:

Environmental Fate: Manganese is a naturally occurring element in the environment occurring as a result of weathering of geological material. It also occurs from its use in steel manufacture/ coal mining. The most commonly occurring of 11 possible oxidation states are +2, (e.g. manganese chloride or sulfate), +4, (e.g. manganese dioxide), and +7 (e.g. potassium permanganate), although the latter is unstable in the environment.

Atmospheric Fate: Elemental/inorganic manganese compounds may exist in air as suspended particulates from industrial emissions or soil erosion. Manganese-containing particles are mainly removed from the atmosphere by gravitational settling - large particles tend to fall out faster than small particles. The half-life of airborne particles is usually on the order of days, depending on the size of the particle and atmospheric conditions. Some removal by washout mechanisms such as rain may also occur, although it is of minor significance in comparison to dry deposition

Terrestrial Fate: Manganese in soil can migrate as particulate matter to air or water and soluble manganese compounds can be leached from the soil. DO NOT discharge into sewer or waterways

#### Persistence and degradability

| Ingredient                         | Persistence: Water/Soil | Persistence: Air |
|------------------------------------|-------------------------|------------------|
| Manganese chloride<br>tetrahydrate | нідн                    | HIGH             |
| Bioaccumulative potential          |                         |                  |
| Ingredient                         | Bioaccumulation         |                  |
| Manganese chloride<br>tetrahydrate | LOW (LogKOW = 0.8494)   |                  |
|                                    |                         |                  |

# Mobility in soil

| Ingredient                         | Mobility          |
|------------------------------------|-------------------|
| Manganese chloride<br>tetrahydrate | LOW (KOC = 23.74) |

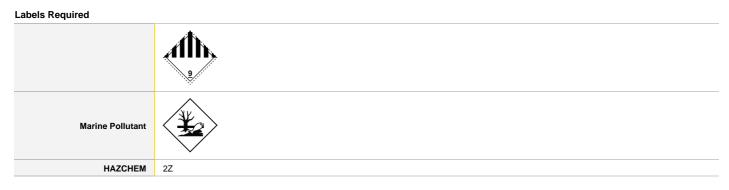

#### **SECTION 13 Disposal considerations**

| Waste treatment methods      |  |
|------------------------------|--|
| Product / Packaging disposal | <ul> <li>Containers may still present a chemical hazard/ danger when empty.</li> <li>Return to supplier for reuse/ recycling if possible.</li> <li>Otherwise:</li> <li>If container can not be cleaned sufficiently well to ensure that residuals do not remain or if the container cannot be used to store the same product, then puncture containers, to prevent re-use, and bury at an authorised landfill.</li> <li>Where possible retain label warnings and SDS and observe all notices pertaining to the product.</li> <li>Legislation addressing waste disposal requirements may differ by country, state and/ or territory. Each user must refer to laws operating in their area. In some areas, certain wastes must be tracked.</li> <li>A Hierarchy of Controls seems to be common - the user should investigate:</li> <li>Reduction</li> <li>Reuse</li> <li>Recycling</li> <li>Disposal (if all else fails)</li> <li>This material may be recycled if unused, or if it has not been contaminated so as to make it unsuitable for its intended use. Shelf life considerations should also be applied in making decisions of this type. Note that properties of a material may change in use, and recycling or reuse may not always be appropriate. In most instances the supplier of the material should be consulted.</li> <li>DO NOT allow wash water from cleaning or process equipment to enter drains.</li> <li>It may be necessary to collect all wash water for treatment before disposal.</li> </ul> |

In all cases disposal to sewer may be subject to local laws and regulations and these should be considered first.

#### **SECTION 14 Transport information**

#### Land transport (ADG)

| 6.1     | 20/06/2022        | Expiration. Review and Update   |

#### Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.
